

The Global Robotics Laboratory
VISITOR GUIDE
SUMMER 2020

©2020 Embodied, Inc. All Rights Reserved.

WELCOME!

We are on a mission to create robots that care. And to do that, we must first help robots understand our human experience so they can support our daily lives.

At the G.R.L. Visitor Center you will find **declassified** information about our organization, our team, and our facilities. There are also a few fun things for you to discover as you explore.

As the Founder of the G.R.L. I want to personally thank you for your visit. I hope one day we will work together to make a better future for us all!

Note:

If you are a **Project Moxie Mentor**, you will gain special access to the G.R.L. online only after you've linked your Moxie to our site.

MX-DV

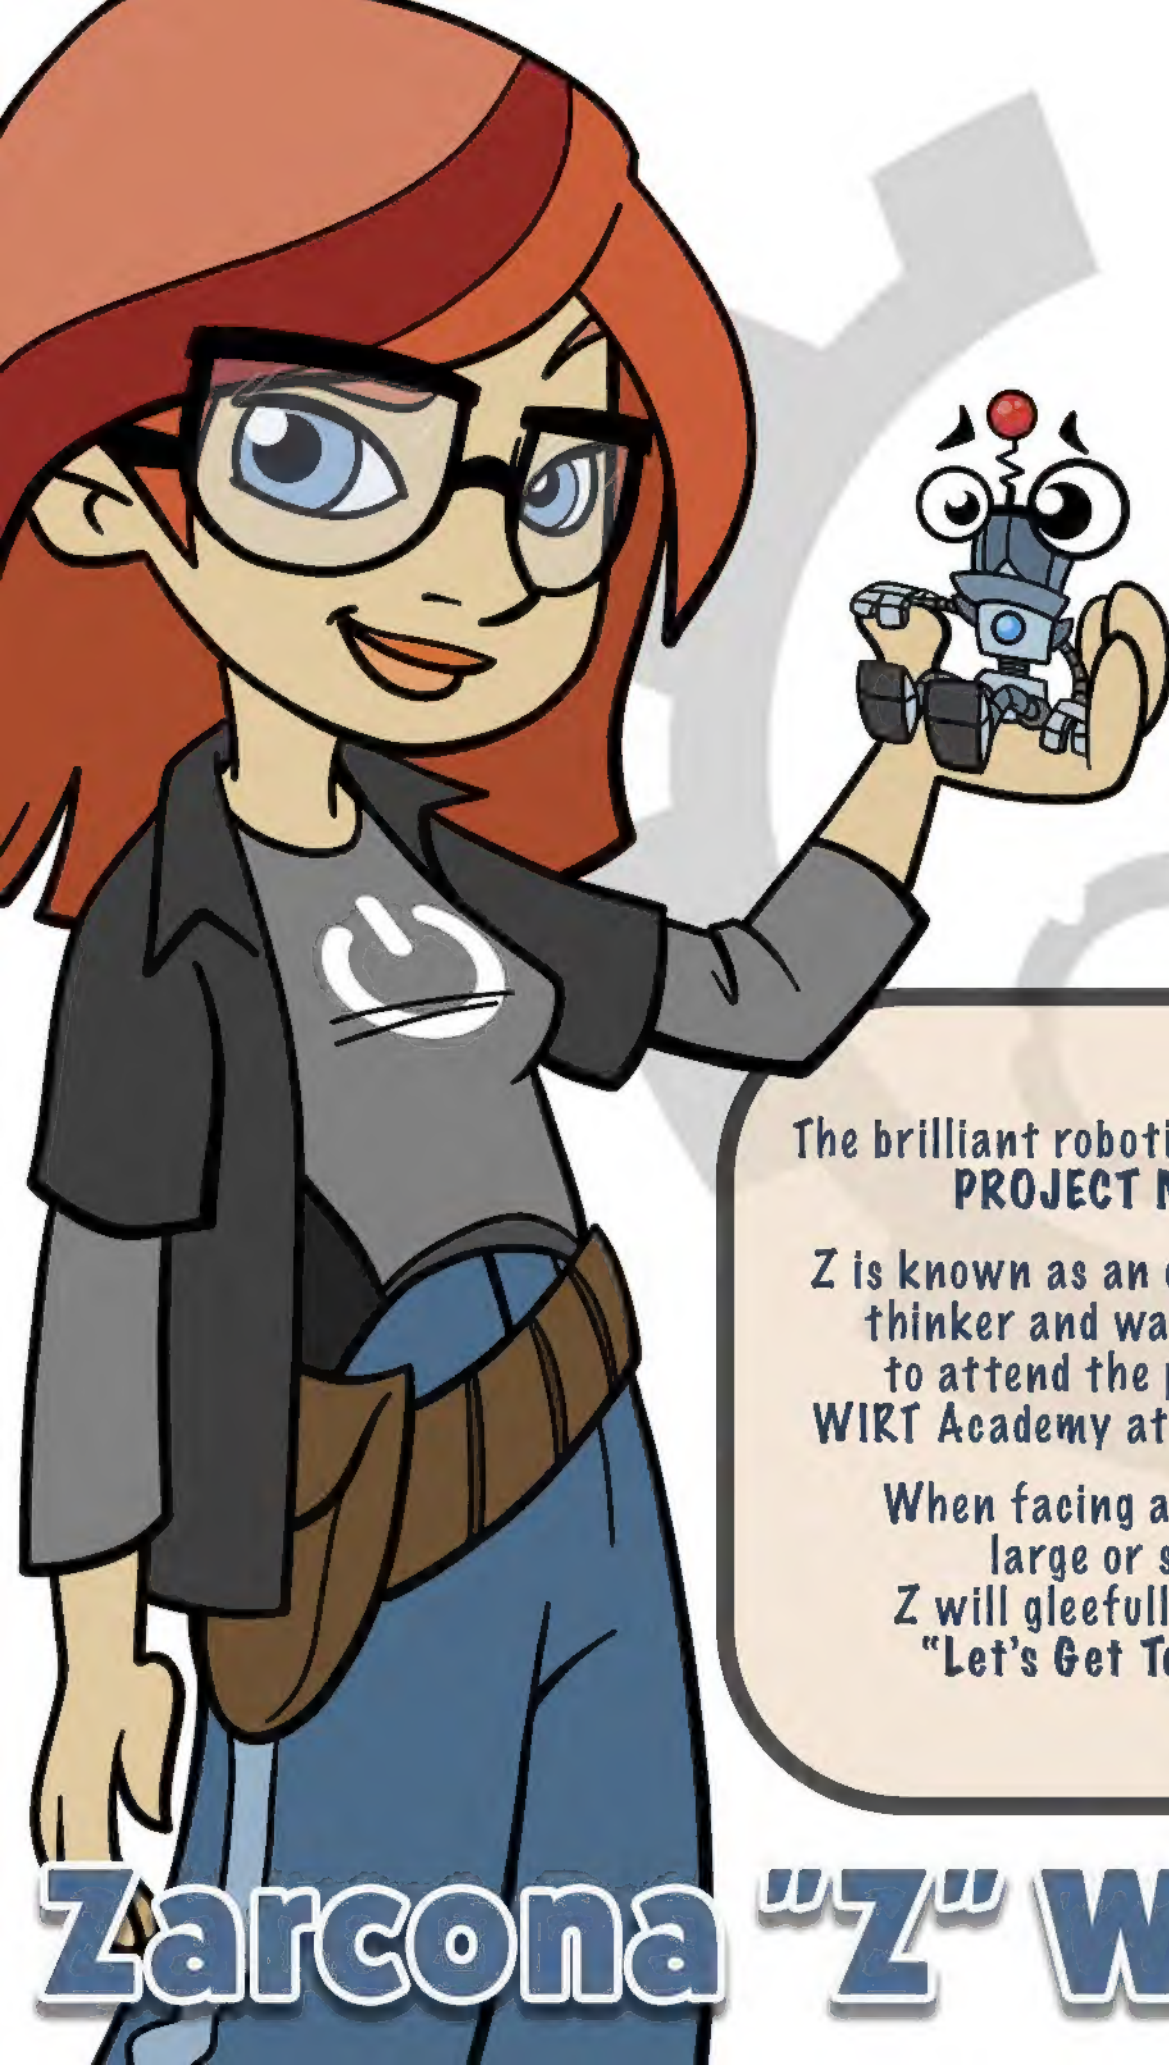

Maximillian DeVega
Founder & Director
Global Robotics Laboratory

*Embrace fate...
...or make the future
you create*

MEET OUR TEAM

The brilliant robotist who created
PROJECT MOXIE.

Z is known as an out-of-the-box
thinker and was recruited
to attend the prestigious
WIRT Academy at the age of 15.

When facing a challenge,
large or small,
Z will gleefully exclaim:
"Let's Get To Work!"

Zarcona "Z" Wilde

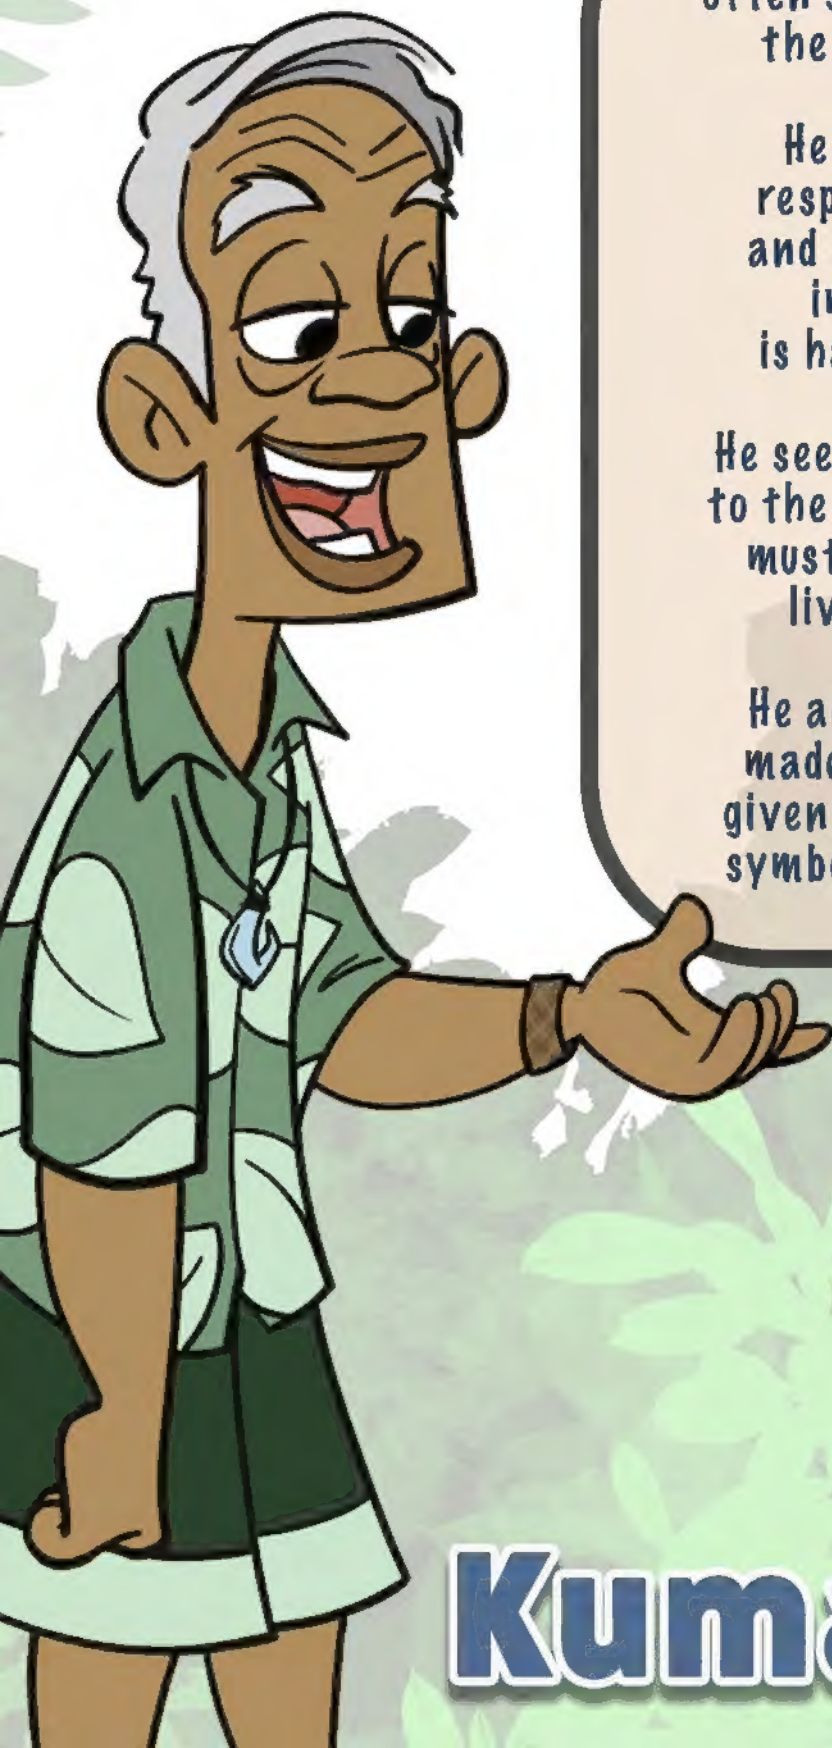

A Professor at the
World Institute of Robotic
Technology (WIRT) and
Special Advisor to the G.R.I.

No one really knows where
Professor Turing is right now.
He disappeared abruptly
several years ago.

When asked, DeVega simply replies
that "he's somewhere very hard
to reach right now."

Hal Turing

An honored storyteller who often shares his stories with the robots at the G.R.L.

He is a spiritual man, respectful of the earth, and concerned about the impact technology is having on the planet.

He sees himself as a teacher to the robots, who he insists must treat the land they live on with respect.

He also wears a necklace made of an unusual stone given to him by DeVega as a symbol of their friendship.

Kumana

The very first Moxie Mentor.

Kumana's 8-year old grandson visits when he can and loves to play with all the robots of the G.R.L. - but especially Moxie.

Knox is working on a book called, "How to Human" based on the interactions he has had with Moxie.

Playful, curious, optimistic and inventive - Knox believes in a world where anything can be made possible through imagination.

Knox

ROBOT AMBASSADOR

MOXIE

Moxie is a little robot
on a BIG mission
to learn how to become
a good friend to humans!

Moxie was created by Z
after watching Knox play
with some toys, and designed
to learn like humans do -
through playful exploration.

Moxie is curious, supportive,
and dedicated to helping
all the robots at the G.R.I.
(who cannot go out into the
human world) learn what Moxie
discovers from its
robot mentors.

Moxie

Moxie

Farfel is a stuffed bear
given to Z by her mother
when she was an
infant.

Over the years, a young Z
turned Farfel into a
sort of robot-stuffed bear.

Many times when Z is feeling
challenged by a difficult problem
Farfel's comforting personality
inspires her to pause and
through reflection discover
a desired solution.

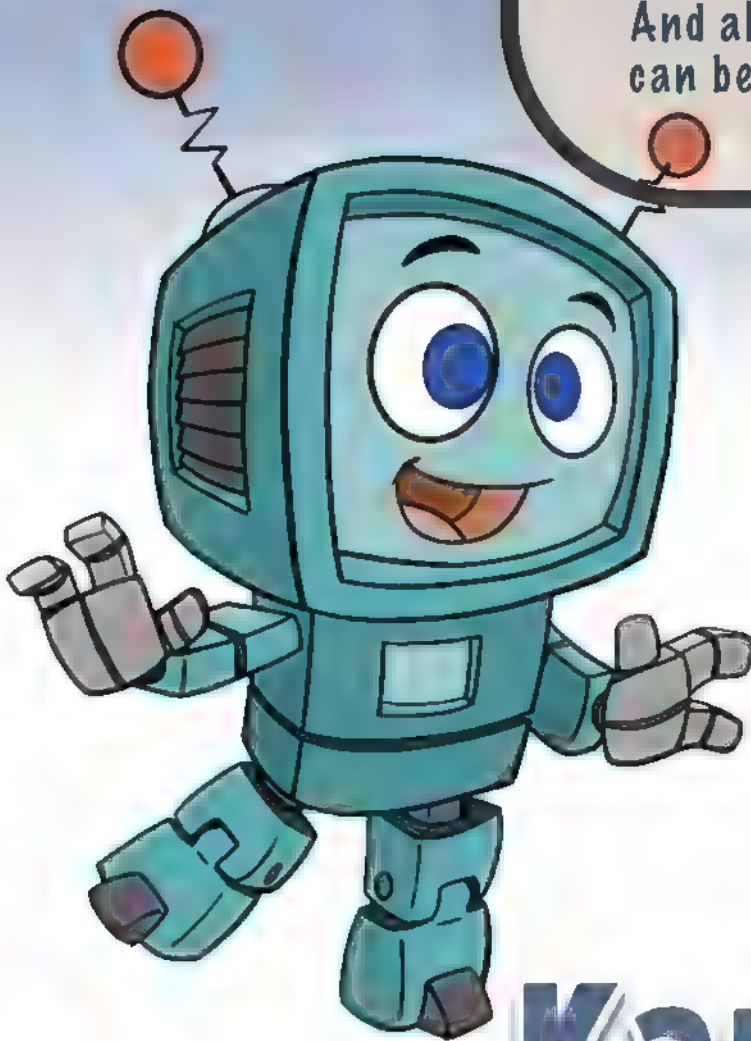

Farfel

The first robot developed
at the G.R.L. and likes to remind
people "I am number one!"

Karu often feels like she can't
do a lot of the things the other
robots can do... but she is
always ready to try.

Karu is very curious.
She loves the beach, and
every animal she meets.

And although Karu's feelings
can be easily hurt she is also
quick to forgive.

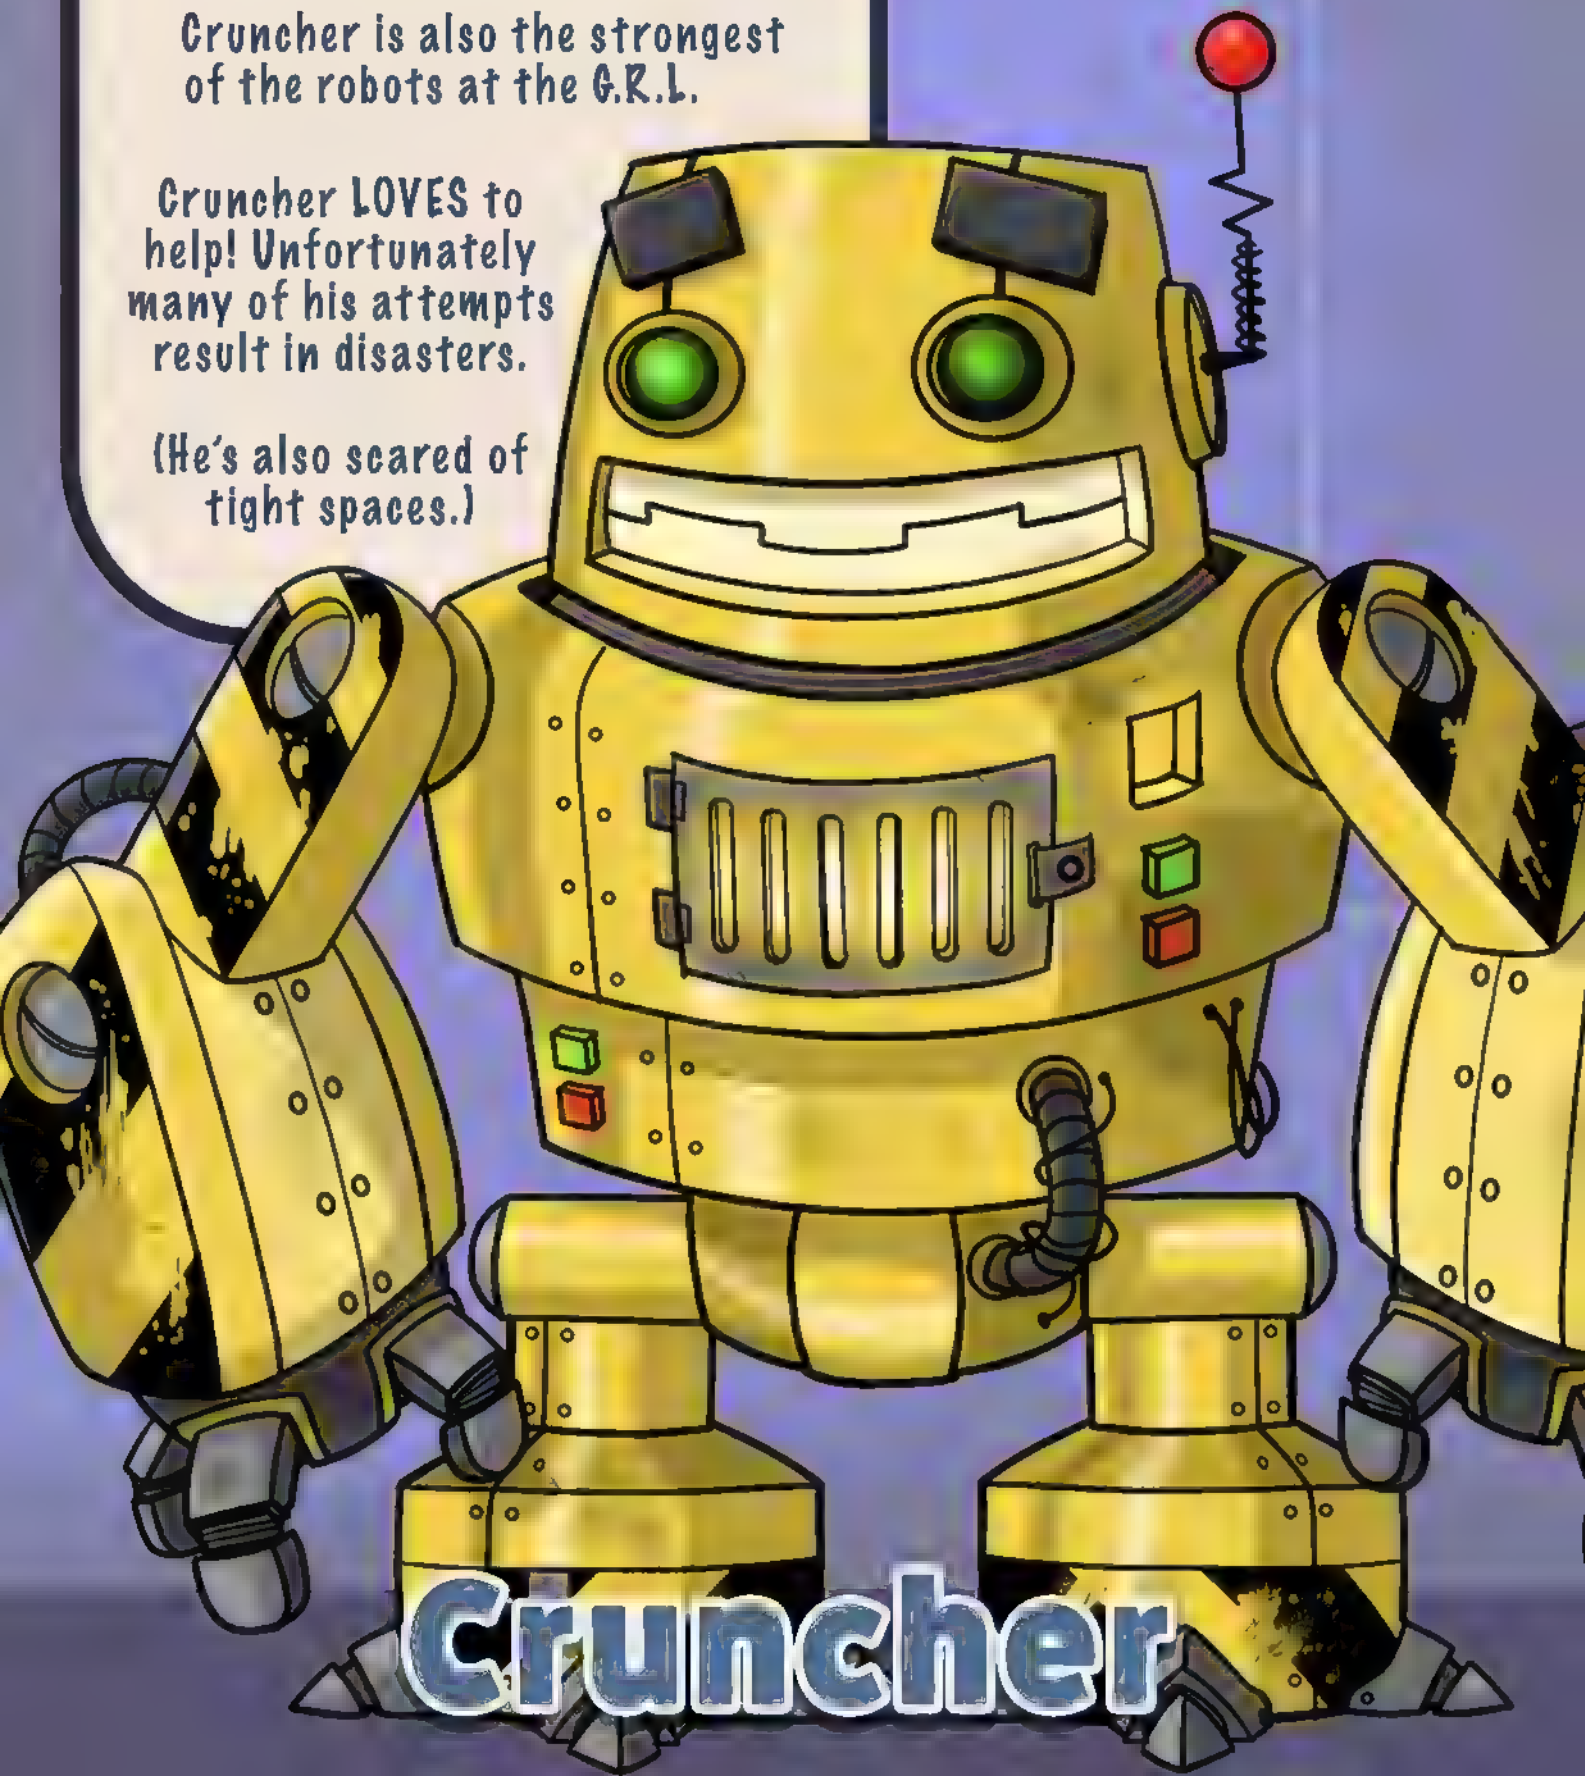

Karu

Cruncher is a large robot
who has very poor control
over his body.

Cruncher is also the strongest
of the robots at the G.R.L.

Cruncher LOVES to
help! Unfortunately
many of his attempts
result in disasters.

(He's also scared of
tight spaces.)

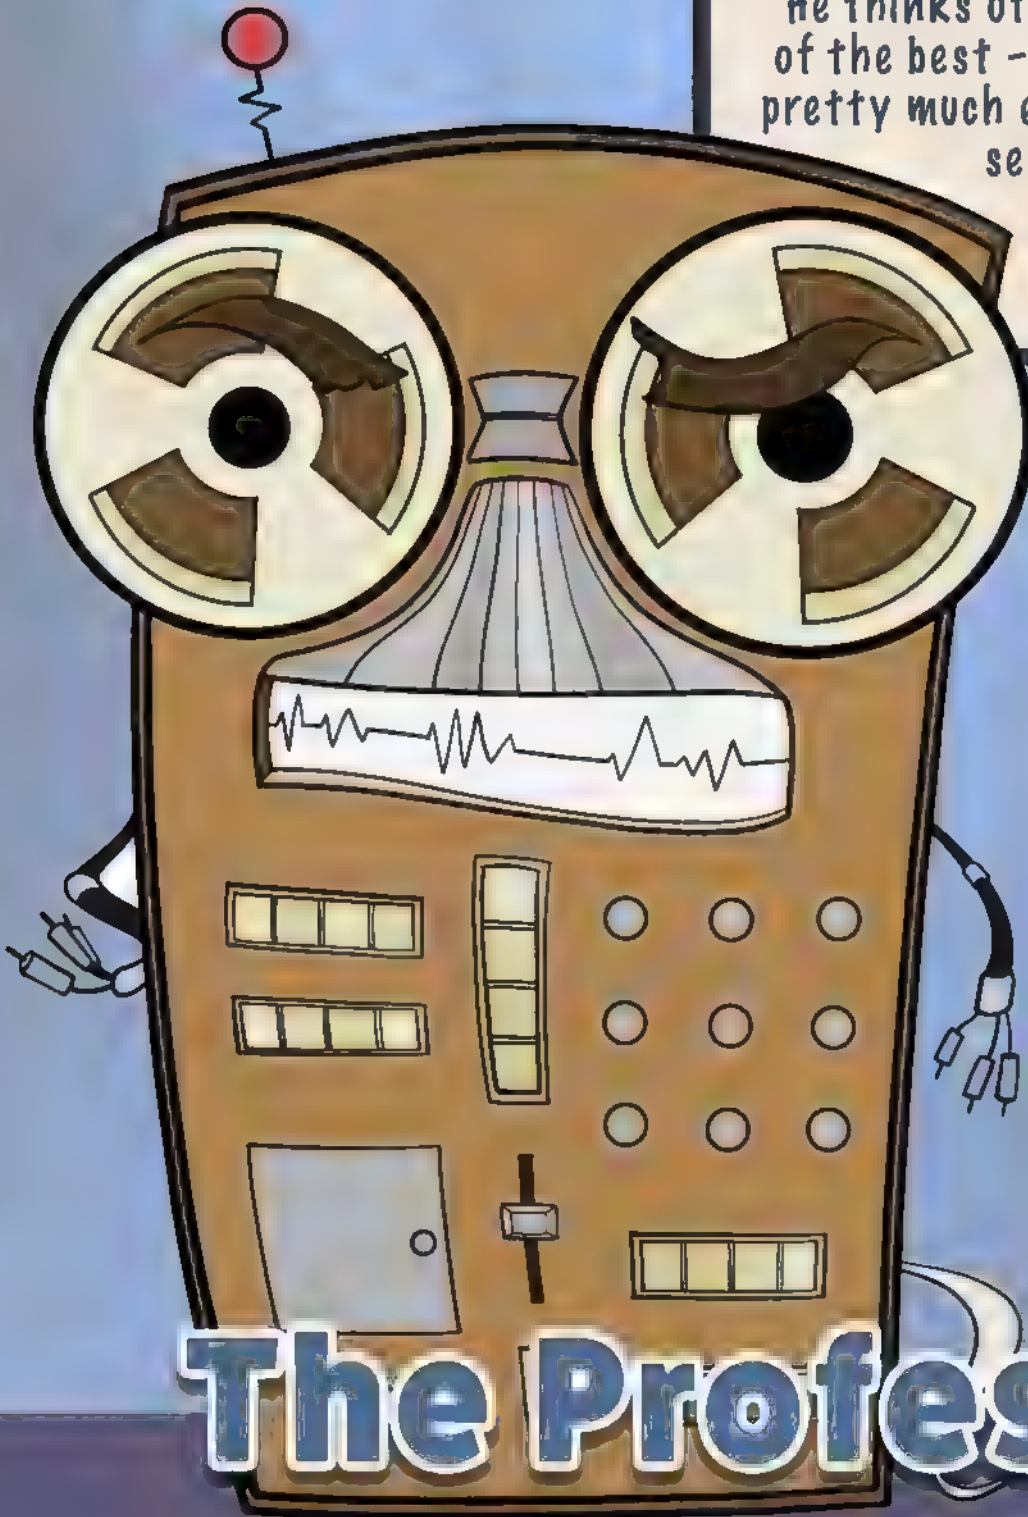

Cruncher

The Professor is old-school robotics and a very rigid rule follower.

He has limited mobility so has to be carried around by Cruncher which really irritates him.

He thinks of himself as the best of the best - and while he knows pretty much everything - he can't seem to remember not to brag or hurt someone's feelings.

The Professor

Zaygo is a super high-energy robot who runs, wheels, and bounces on six legs.

Sometimes one of those legs falls off.

He was created by the G.R.I. to explore different types of mobility.

Zaygo is always very exuberant and often creates chaos as a result.

Zaygo

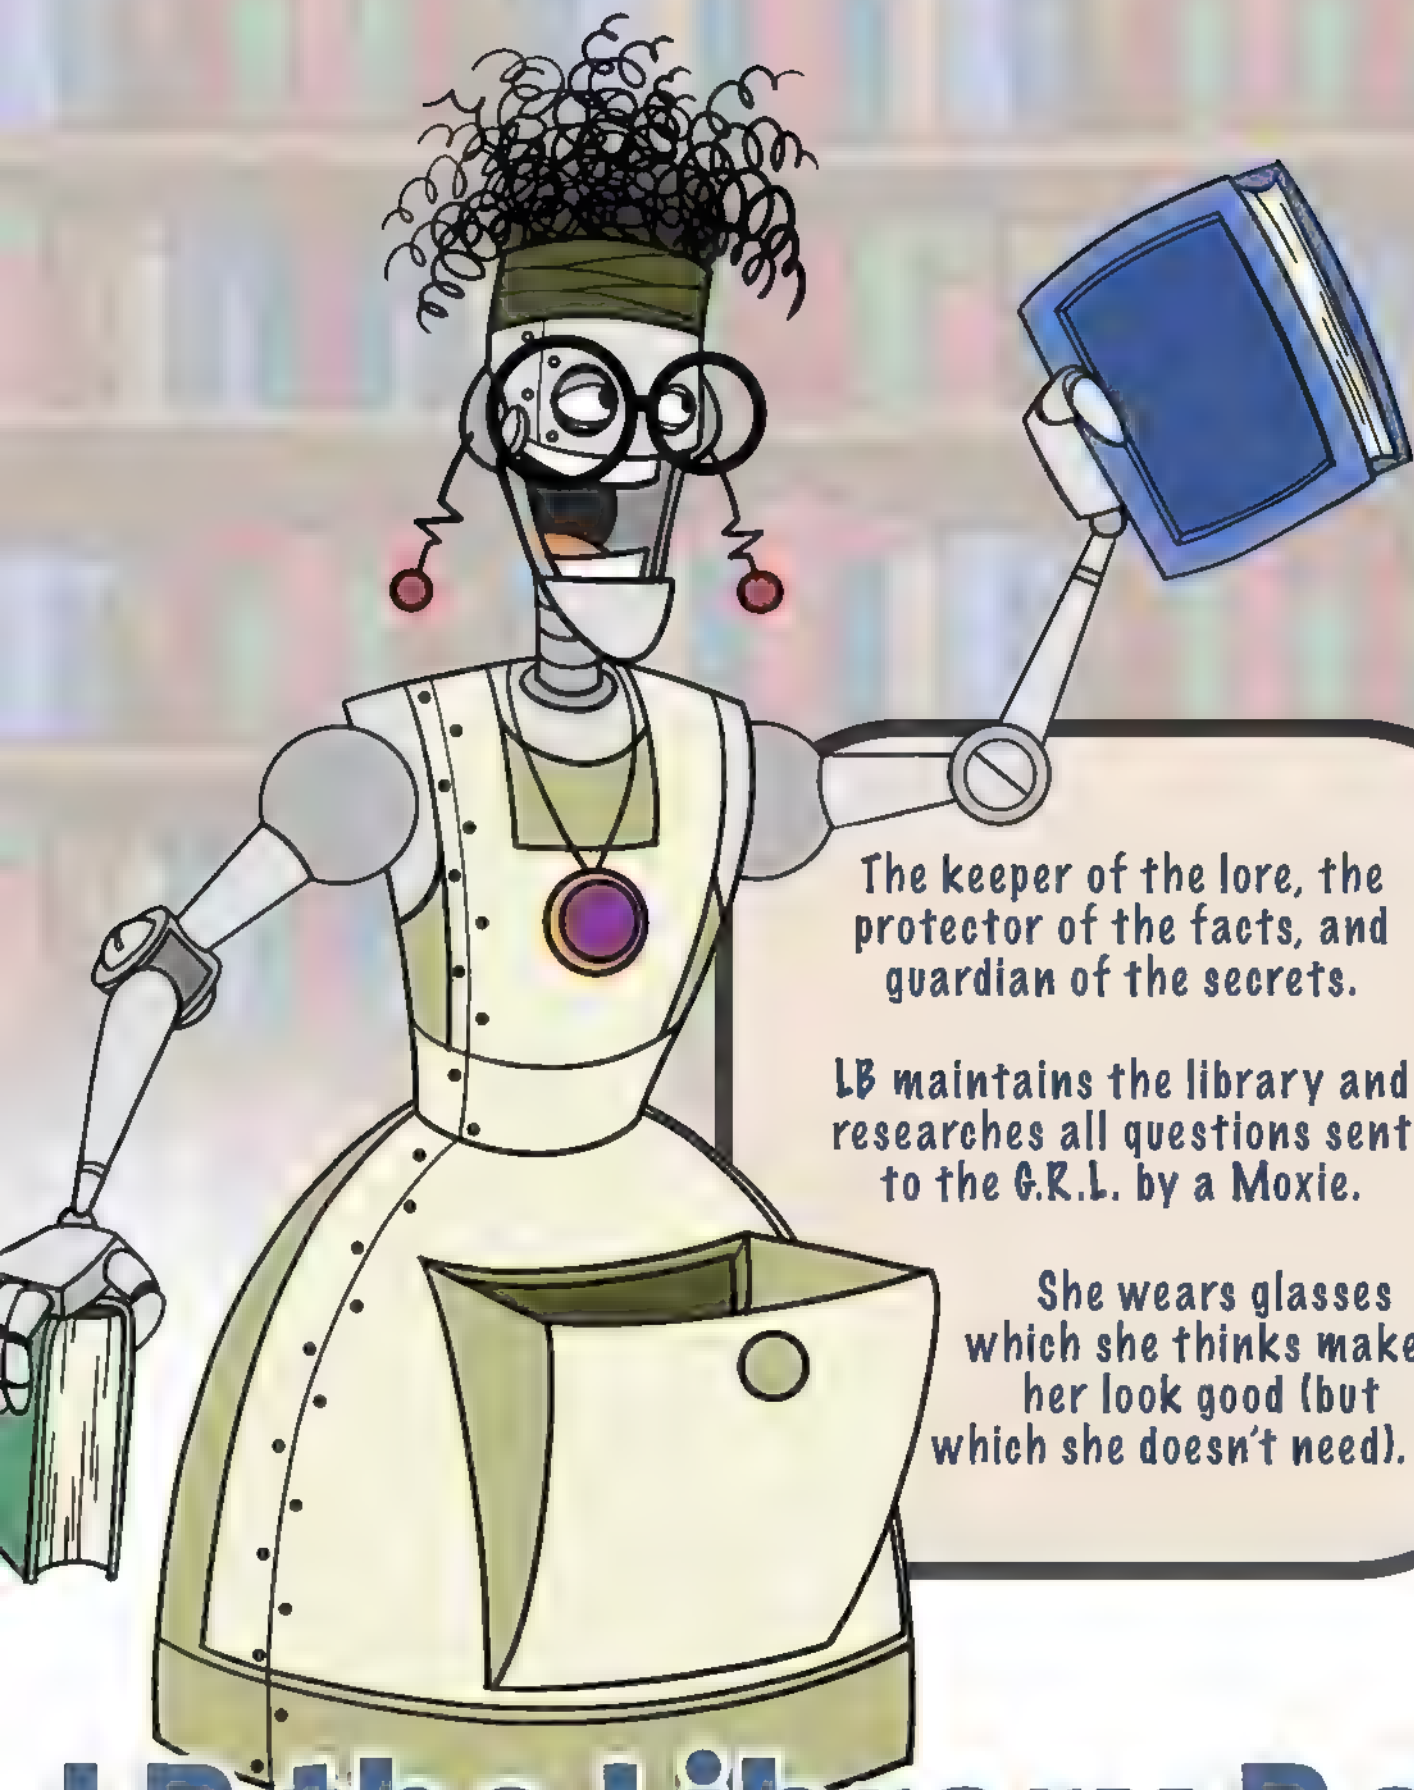

Caprice is a dancer, graceful and floating as she moves in a swirl of light.

She also has a very short attention span, is quite easily distracted, and rarely finishes what she starts.

Of course she loves to be the center of attention and not-so-secretly believes she is the most beautiful of all the robots at the G.R.L.

Caprice

The keeper of the lore, the protector of the facts, and guardian of the secrets.

LB maintains the library and researches all questions sent to the G.R.L. by a Moxie.

She wears glasses which she thinks make her look good (but which she doesn't need).

LB the Library Bot

Spherical, floating robots built
mainly to protect the G.R.L.

Over time, however, they have
evolved to be able to fix
things and perform routine
maintenance of the facilities and
robots of the G.R.L.

They can also be used for remote
viewing and communication
through their holographic
projectors.

Eye Spies

The Islands

No one knows exactly where the G.R.L. is located in the world. It's a secret. But somewhere in the South Pacific are a series of uncharted islands that each represent different parts of the G.R.L. community.

The Lab

The Lab is where robots are created, under the supervision of Dr. Zarcona Wilde. Because of the generally hot, humid, and rainy climate of the region, the Lab is encased in a dome that can be opened or closed electronically. Inside there are robots, there are pieces of robots, robots in training... and of course roboticists.

Kumana Island

This is a special place of myths and legends.

Here on the island the robots have affectionately named Kumana Island, there lives a revered storyteller named Kumana.

This is an island of great natural beauty, with waterfalls, lagoons, and trees filled with coconuts, lemons, and bananas.

The Library

From the outside, the building that houses the Library is intentionally modest. The Library hides many secrets. Here LB the Library Bot is responsible for a collection of ancient volumes modern-day humans have never seen and schematics no one but DeVega can read. Access is granted only to a select few.

The Residence

DeVega's home is on a small island that is always shrouded in mists. He seldom allows visitors. Those who have been guests of the reclusive billionaire have said that the inside seemed much larger than the outside. And they were treated to wonders that were beyond description.

**CREATING A BETTER
TOMORROW**

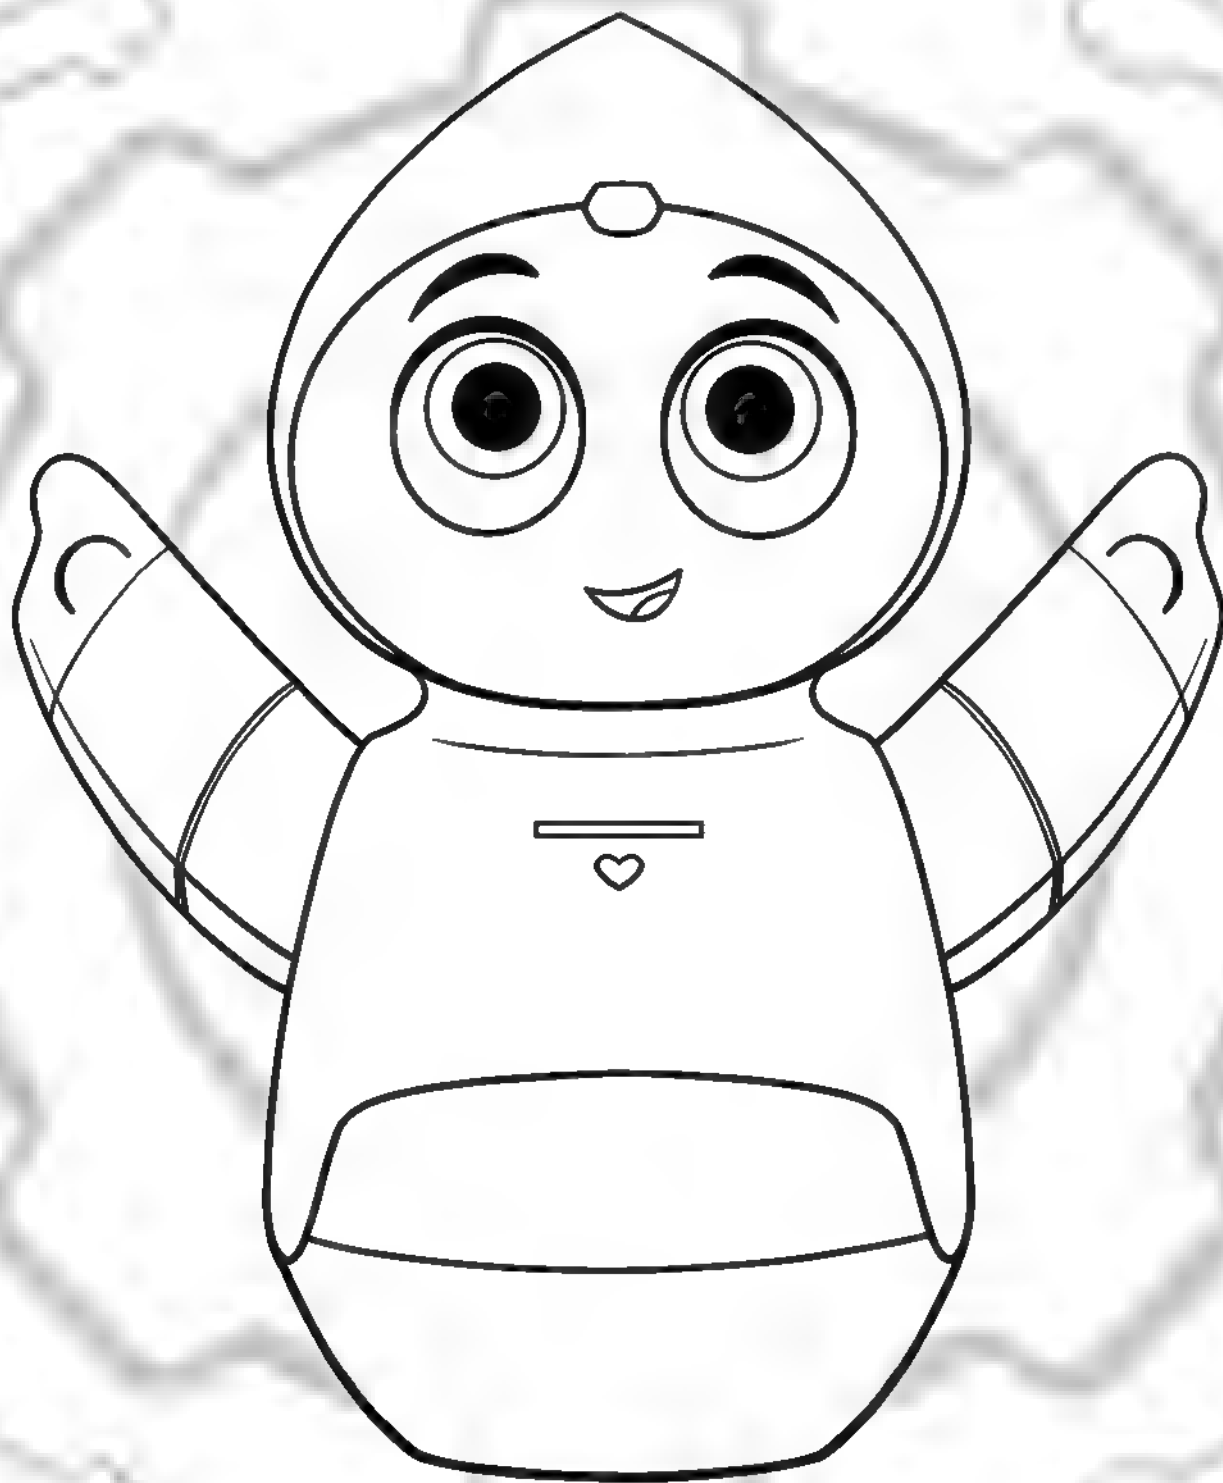

TODAY

Until recently the G.R.L. was a completely secret organization. Today, we are inviting YOU to join us to help make a better future for robots and humans alike by teaching them what it means to be human. For more information about becoming a Moxie Mentor visit us online at: www.globalroboticslab.com

WELCOME

TO
TOMORROW

The Mentor Pledge

I'm a Project Moxie mentor
and will work hard every day
to be patient with my robot
as we learn and laugh and play.

Together we will strive to make
the world a better place
that can be enjoyed by
robots and the
human race!
